Samuil Iordachi

Minneapolis | U.S. Citizen

952-846-8285 Samuiliordachi@gmail.com

Technical Skills

Languages: Java, Python, C++, TypeScript, SQL
Frameworks & Libraries: React, FastAPI, Flask, Dash, Pandas, NumPy, SciPy, Playwright
Cloud & DevOps: AWS, Lambda, EC2, S3, Kubernetes, Helm, Docker, Jenkins, Ansible, CI/CD
Technologies & Tools: Linux, Git, GitHub, Figma, Jira, PostgreSQL, DynamoDB, Redis

Experience

Ameriprise Financial — August – Present

DevSecOps Engineer (Part-Time)

- Engineered an automated **Jira access compliance** system that reconciles user permissions against authorized access records in **Active Directory** and **ServiceNow**.
- Automated detection, notification, and scheduled removal of non-compliant users using **Jenkins**, **Ansible**, and **CI/CD pipelines**, with scheduled reporting and audit logging for remediation tracking.
- Supported **DevOps** workflows and **cloud infrastructure** using **Kubernetes**, **Helm**, and **AWS Lambda** alongside enterprise security and compliance automation.

Ameriprise Financial — July 2026 – August 2026

Software Engineer Intern

- Migrated a legacy Java/Selenium test framework to **Playwright**, **Gherkin**, and **Cucumber**, building reusable components and behavior-driven **integration testing** scenarios.
- Automated test-data provisioning and dynamic suite selection across **5 enterprise applications**, increasing automated test coverage by **85%**.

Solventum (formerly 3M) — May 2025 – September 2025

Software Engineer Intern

- Collaborated with senior engineers to architect and develop a full-stack web application using **Dash**, **Pandas**, **NumPy**, and **Plotly**.
- Built visualization and mathematical modeling tools for research scientists, streamlining manual analysis and establishing a centralized scientific data repository.
- Implemented **cloud infrastructure** and backend service integrations using **FastAPI**, **AWS SDKs**, **EC2**, **S3**, and **DynamoDB** for scalable data storage and processing.

Vervint — May 2024 – Aug 2024

Software Engineering / Automation Intern

- Engineered and deployed **PowerShell automation tools** for inventory management, asset lifecycle workflows, and ticket resolution tracking, reducing manual operations by **80%**.
- Designed scalable automation pipelines that cut **software deployment time by 80%** and boosted team productivity by **40%**.
- Applied systematic debugging and root-cause analysis to improve incident resolution processes, achieving a **60% reduction** in time-to-fix.

Projects

GRISK – Stock Analysis & Paper Trading Bot | *Python, PRAW, NLTK, Pandas, Dash*

- Developed an automated **data pipeline** using **PRAW** and **Python** to ingest and process stock mentions and trends from the WallStreetBets subreddit in real time.
- Built a sentiment analysis engine with **NLTK** and **Pandas**, using a custom lexicon tuned for WSB-specific terminology to improve accuracy.
- Designed a responsive **Dash** dashboard displaying live market data, trends, and simulated portfolio performance with interactive charts.

Self-Hosted ML Web Scraping Platform | *Python, FastAPI, Celery, Redis, PostgreSQL, Docker, Raspberry Pi*

- Built a containerized backend platform on a **Raspberry Pi** to orchestrate ML-powered scraping jobs with **Celery**, **Redis**, and **APScheduler** for distributed scheduling.
- Developed secure **FastAPI** REST services with rate limiting and persistent storage using **PostgreSQL** and **MinIO** for large-scale artifacts.
- Implemented observability and fault tolerance via **Prometheus/Grafana** monitoring, chaos testing, retries, and backoff strategies.
- Scaled the system to process **10k+ documents/day** with **p95 latency** $<$**120ms**, demonstrating production-grade distributed systems design.

Leadership/Extracurricular

1st Place – Solventum Hackathon — June 2025

Full-Stack Developer

- Developed a full-stack **React** web app in a **72-hour hackathon**, using **TypeScript** for frontend development and maintainability.
- Integrated **Plotly.js** for interactive charts and **ag-Grid** for enterprise data tables.
- Architected scalable backend infrastructure with **FastAPI**, **AWS S3** for file storage, and **DynamoDB** for NoSQL database operations.

Google Developer Student Club – Anoka-Ramsey — Jan 2025 – Present

Vice President

- Served as **Vice President**, leading a development team of 4 to design and launch a web app for Minnesota State college students.
- Architected a full-stack solution to streamline course scheduling and graduation planning, reducing manual planning time by **70%**.

Education

University of Minnesota, Twin Cities

*B.S. Computer Science - **3.60 GPA*** — *Expected May 2027*
